Climate Resilience & Ecological Frontiers

Special Edition 2024 -- Faculty of Technological Studies

Dedicated to climate mitigation strategies in tropical island ecosystems.

Examines micro-irrigation, wetland conservation, and bio-waste conversion.

Authored by student researchers from the Department of Biosystems Technology.

Uva Basin Hydrology & Micro-Watershed Conservation

Environmental Engineering Study -- Badulla Valley Catchment

Mapping cloud forest run-off patterns along the Namunukula mountain ridge.

Community-led telemetry stations measuring rainfall intensity and soil erosion.

Policy recommendations for protecting municipal springheads.

Biochar Production from Agricultural Residues

Circular Bio-Economy Research -- Organic Soil Amendment

Evaluating pyrolysis efficiency using rice husk and tea pruning waste.

Field experiments showed 40 percent improved moisture retention in sandy loam.

Cost analysis for rural smallholder adoption in Wellawaya.

Student Climate Action Network

Initiatives and Green Campus Campaigns at Uva Wellassa University

Tree canopy restoration: 2,500 endemic saplings planted along campus boundaries.

Solar micro-inverter installation powering the environmental science laboratories.

Zero-single-use-plastic initiative across student dining facilities.
